

Filter Specification

BSG 500

FLOW DATA

Capacity	2,641 – 14,425 GPM*
Flushing flow rate	Min. 1664 GPM
Average water losses	37.0 GPM
Pressure losses	See selection chart
System pressure	4.4 - 150 psig
Filtration	2 mm
Max particle size	40 mm

* The Bernoulli Filters can also operate at higher flow rate with increased pressure losses.

MECHANICAL DATA

Design pressure	100 or 150 psig.	Body	GRP
Test pressure	150 or 225 psig.	Basket	AISI 316L alt Ti
Design temperature	140° F.	Flushing valve	AISI 316L
Weight	1,210.0 #	Piston	AISI 316L
Volume	224.0 gal.	Disk	Polyacetal
End cover weight	194.4 #	Piston seals	Polyurethane
Basket weight	59.4 #	End cover gasket	EPDM
Basket weight	59.4 #	End cover gasket	EPDM

PNEUMATIC DATA

ELECTRICAL DATA

Air pressure	Min.
Air consumption	6.0 (
Average air consumption	0.17

in. 90 psig. 0 CF/flush cycle free air 17 CFM free air Power Consumption

MATERIALS

220 V AC 20 W

AUTOMATIC CONTROL

General The Bernoulli Filter is equipped with a differential pressure control which senses the degree of clogging and automatically starts flushing when the basket is clogged to approximately 2/3. The differential pressure switch is connected so that it is independent of the normal throughput and needs no adjustment during operation.

The electronic control also include a timer control with a preflushing and a flushing interval.

- External Three potential free contacts for 'FILTER IN OPERATION', 'FLUSHING' and 'ALARM' are provided.
- Alarm The automatic mode of the operation include two kinds of alarm functions:
 - 1) Restriction in movement of the piston
 - 2) Degree of clogging. The degree of clogging is indicated by a differential pressure switch.

Both kinds of faults give one common external alarm but they are separated in the control panel
